## ACTIVE SUBSTANCE EVAPORATOR

## **ABSTRACT**

for using active substances established in a paper tablet or the like, or in a tray with a semipermeable membrane, in gel form, consisting of a base body (1) with a U-shaped profile inside which is coupled by insertion a support (8) provided with two housings (10) and (11), the former adapted in size and shape to receive within it a tray (13) and the second to receive a tablet (12), so that both the tray and the tablet can be placed in the same support opposite the heating surface (3) of the device, which

format of the active substance.

The device also includes safety means consisting of teeth that lock in the closed position, preventing or making it difficult for children to displace or extract the support from the casing (1), as in order to release it is necessary to press inwards on two lateral opposing areas of the casing (1).

therefore allows using said device equally with either
